

BANNED/RESTRICTED CHEMICALS POLICY & PROCEDURE

We at Vamani are committed to provide the sustainable product to our valued customers/brand. We have a well defined policy for usage of chemicals. We respect the requirements of our customers and also at the same time we are cautious about the health of our employees. Hence we have policy for not to use Banned/Restricted chemicals throughout our manufacturing process. Brands has given RSL(Restricted Substance List)/MRSL(Manufacture Restricted substance List) chemicals list. The purpose of these requirements is to restrict the use of hazardous substances in the supply chain. A brand's RSL/MRSL list clearly sets standards for manufactures for the hazardous substances that are restricted.

After reviewing the list of restricted chemicals defined by our customer, we use only allowed and sustainable chemicals.

We provide MRSL to our chemical supplier in order to understand the customer requirements & they send us chemical which does not contain any hazardous substance provided in list and along with our chemical supplier, we ensure to use best chemical which are free from hazardous content.
